Better process, more testing, formal methods, ... The fundamental problem: poor software development literacy Code is not written by "computer" people Managers don't get why software is difficult Low probability failures \* large fleet exposure And ... machine learning makes things harder!

### Embedded System Software Quality

Better Embedded System Software Blog Bio & Contact: My background includes time as a submarine officer for the US Navy, a principal in a couple small startups, an embedded CPU architect for Harris Semiconductor, and an embedded system architect for United Technologies Research Center.

### Philip Koopman's Home Page: Embedded System Dependability ...

Embedded software typically implements higher-level features and functions of the device. Firmware takes care of low-level tasks such as converting analog sensor signals to digital data and managing communications protocols. Embedded software can be highly sophisticated, and is often written in high-level languages such as C++, Java, JavaScript, or Python.

### Firmware vs Embedded Software - What's the difference?

Better Embedded System Software - just a dream In summary the Koopman book "Better Embedded Systems Design" is a really good overview of the things that need to be done to get "good" software. It seems that mostly people ignore all this software quality stuff in power supplies.

### Better Embedded System Software - Book review

Better Embedded System Software PDF. This book distills the experience of more than 90 design reviews on real embedded systems into a set of bite-size lessons learned in the areas of software development process, requirements, architecture, design, implementation, verification & validation, and critical system properties.Each chapter describes an area that tends to be a problem in embedded system design, symptoms that tend to indicate you need to make changes, the risks of not fixing ...
