"in reality". This happens when there are one-to-one correspondences between S and N but all of them lie outside the given model. What is a "countable" set from the point of view of one model may be an uncountable set from the point of view of another model. As Skolem sums it up, "even the notions 'finite', 'infinite',

Unfortunately, most modeling tools cannot even draw logical data model. Instead, they use UML class notation and class attributes to represent logical data model and that is the main reason why is it possible to specify data-types in such modeling tools. But again, that model is more of a class diagram than a logical data model.
