A Petrologist is a Scientist who studies stone. Solid, strong, sturdy, and virtually impenetrable — without a jackhammer, at least — stone is the perfect building material for keeping out bad weather and invading armies, which is why the Great Wall of China, medieval castles, and the Great Pyramid of Giza are all made of it. While stone's literally "rock hard," however, it's nonetheless the job of a Petrologist to get inside it.

A petrologist is a scientist that studies rocks. The first tool that most petrologists use is a petrological microscope. This is used to view thin sections of rocks (thin slices of rock that are about a hair's thickness). This microscope uses polarized light (light in which all the waves vibrate in a single direction).
