Drysuit Diving Manual

A drysuit is a suit which protects its wearer by the exclusion of water and contaminants when underwater. Latex seals are attached to the body of the suit at the neck and cuffs to prevent water from entering whilst submerged. Various types of underwear can be worn under the suit depending on water temperature, depth and diver activity.

Becoming a dry suit diver allows you to expand your boundaries and dive more places, more often. This suit seals you off from the water and keeps you comfortable, even in surprisingly cold water.

Dry Suit Diver | PADI

Drysuits are must-have pieces of kit for divers who regularly explore cold waters. They're also handy for divers and dive pros who spend a lot of time in temperate waters. Unlike wetsuits, drysuits keep you warm by trapping a layer of air between the suit and your body. To do this effectively, drysuits need to be completely watertight.
