Connect the timing-light red lead to the positive terminal on the battery and the black lead to the negative. Connect the remaining end with the snap to the number-one spark plug wire, which is the closest wire to the radiator on the driver's side. Move all wires clear of all moving or hot parts and lay the timing light on the driver's fender.

## **How to Time a Big Block Chevy | It Still Runs**

With the Number One spark plug removed, place your thumb over the hole while turning the engine. Once you feel compression building, look for the zero mark on the harmonic balancer to approach the timing tag. We prefer to set the initial timing for most engines at 10 degrees Before Top Dead Center (BTDC).

## **How to Install a Distributor and Set Initial Timing**

Connect the timing light to the battery by placing the red lead on the positive terminal and the black lead on the negative. Clamp the pickup lead around the first spark plug wire closest to the radiator. Step 2 Unplug the vacuum advance hose from the distributor and plug it with a screw so it doesn't leak vacuum.
