GENERALISED EQUATIONS OF MOTION In the hydroelasticity theory of ships developed by Bishop and Price (1979) the hull is assumed beamlike and its vibration characteristics in vacuo are determined in the absence of damping and external forces.

HYDROELASTICITY OF MARINE STRUCTURES - ScienceDirect

Hydroelasticity is of concern in various areas of marine technology such as: High-speed craft. Ships with the phenomena springing and whipping affecting fatigue and extreme loading; Large scale floating structures such as floating airports , floating bridges and buoyant tunnels. Marine Risers.

Abstract Investigations into hydroelasticity of ships commenced in the 1970s. Since then the theory has been employed to predict the responses of a wide range of marine structures, such as mono- and multihulled ships, offshore structures, and VLFS.

Hydroelasticity of ships: Recent advances and future ...

This book, however, shows how the wave responses of a ship can be calculated using linear dynamics. The authors integrate the techniques of structural theory, hydrodynamics, oceanography and statistical theory in their systematic use of dynamical theory.
