use broadband routers are easier to manage than those without one, but technical glitches with the router can also prevent computers from connecting to the Internet. Router failures are caused by overheating, excessive traffic, or simply an older unit going bad.

Can't Connect to the Internet? These 10 Tips Can Help

Move closer to the router – Routers have a limited range of how far they can extend Wi-Fi signals, so the further you are from the router, the weaker your connection is likely to be. Disconnect devices not in use – The average household has more than 10 connected devices and each one eats into available bandwidth. If you need a faster connection, try disconnecting some of the devices that are not currently in use.
