Law information retrieval systems use law ontologies to represent semantic objects, to associate them with law documents and to make inferences about them. A number of law ontologies have been proposed in the literature, what shows the variety of approaches pointing to the need of matching systems.

Semantic Technology, ontologies are part of the W3C standards stack for the Semantic Web. They provide users with the necessary structure to link one piece of information to other pieces of information on the Web of Linked Data.

## **What are Ontologies and What are the Benefits of Using ...**

The role of vocabularies on the Semantic Web are to help data integration when, for example, ambiguities may exist on the terms used in the different data sets, or when a bit of extra knowledge may lead to the discovery of new relationships. Consider, for example, the application of ontologies in the field of health care.

## **Ontologies - W3C**

What an ontology can do, however, is to “learn” about the semantic meaning of a term through the interlinks between the concepts in its system. Powerful ontologies already exist in specific domains, examples include the Financial
