Rewriting is a natural model of computation and an expressive semantic framework for concurrency, parallelism, communication, and interaction. It can be used for specifying a wide range of systems and languages in various application domains. It also has good properties as a metalogical framework for representing logics.

Rewriting Logic. Equational Specification | The semantics can be used to answer concrete questions, e.g. whether two terms have the same meaning. | However, it is more convenient to use syntactic means to answer such questions. It would also provide more opportunities for efficient mechanization. | Under certain conditions equational deduction can be
